Fall 2020 - A Term

Department of Mathematical Sciences

Faculty: Francesca Bernardi, John Goulet, Xavier Ramos Olivé, Dina Rassias, Stephan Sturm

## MA 1023

# Calculus III

### Conference 1 – Ideas

*Covers material from Lecture 1-3  
& Active Learning 1*

1. Calculate the following limits with and without using l'Hôpital's rule:

a)  $\lim_{x \rightarrow 1} \frac{x^8 - 1}{x - 1}$

b)  $\lim_{y \rightarrow 0} \frac{\sin(y) \cos(y)}{\sin(2y)}$

c)  $\lim_{z \rightarrow 0} \frac{\tan(z)}{1 - \cos(z)}$

2. Calculate the following limits of fractions

a)  $\lim_{x \rightarrow 0} \frac{8x^2}{\cos(x) - 1}$

b)  $\lim_{\varphi \rightarrow \frac{\pi}{2}} \frac{1 - \sin(\varphi)}{1 + \cos(2\varphi)}$

c)  $\lim_{t \rightarrow 0} \frac{t \sin(t)}{1 - \cos(t)}$

3. Calculate the following limits of products, powers and differences

a)  $\lim_{x \rightarrow 0} x^2 e^{-x}$

b)  $\lim_{y \rightarrow 1+} y^{\frac{1}{1-y}}$

c)  $\lim_{x \rightarrow \infty} (1 + 2x)^{\frac{1}{2 \ln(x)}}$

d)  $\lim_{z \rightarrow \infty} \left( \frac{z^2 + 1}{z + 2} \right)^{\frac{1}{z}}$

e)  $\lim_{y \rightarrow 0+} \left( \frac{3y + 1}{y} - \frac{1}{1 - \cos(y)} \right)$

4. Explain what it means to say that

$$\lim_{x \rightarrow 0+} \left( \frac{1}{x} \right)^x = 1.$$

Why this makes sense even though the base is infinity zero for  $x = 0$ , the exponent is zero and  $\infty^0$  is not defined? Your answer might be a mix of text, graphics and mathematical expressions.
